

# Eagle – 3 Balloons

Whilst I was doing this model I thought of a quick lazy way to show the measurements when it is necessary to do so.

Keep all remnants, there is very little waste.

Inflate a black 206 as shown.

Inflate a small yellow bubble for the beak and stretch one end back to the other as shown.

Inflate a white balloon about half way and attach the yellow beak.

Locktwist two bubbles together.

Make a soft bubble (3) by giving it a little squeeze as you twist it. Push the soft bubble up between bubbles 1 and 2 allowing them to roll over the soft bubble.

Make a bubble for the neck and remove the remaining length of the balloon but keep it handy

Attach the black balloon to the end of the neck and lock twist two bubbles together.

Make another bubble lightly softer than the previous two and roll it between the previous two.

Continue with one 2" bubble and three 1" bubbles followed by another 2" bubble. Twist the last bubble in at the base of the body.

Make three 1" bubbles followed by one 3" bubble. Twist the 3" bubble in at the base of the neck. Continue with another 3" bubble and three 1" bubbles. There should be a small bubble left at the end which is twisted in at the base of the body.

Inflate the yellow balloon again leaving and make two 3" bubbles. Lock them together and make a pinch twist. Make another 3" bubble.

Twist the bubble in at the base of the body and make three 3" bubbles. Locktwist the last two bubbles together. Remove the remaining balloon.

Make a string of white bubbles along the wing as shown

Use the re  
make a st  
three tail l

Draw a fa  
Here I pu

You could make a chick and nest.

Or how about using one more balloon to make it a simple flying eagle.
