

Snowman

You will need:

2 x 5" round

1 x 10" round

350 Scrap (hat)

260 scrap (hat)

Orange scrap (nose)

1 x 160 (scarf)

Insert two knotted scraps into
a 5" round balloon.

Inflate a 350 scrap to approximately 4"

To make the top of the hat, make an apple twist by pushing the knot into the balloon and catching hold of it through the balloon as shown.

Tie the knot into place. It should look like this.

Inflate the 5" round balloon a little way from the lip. At the tip end catch hold of one of the scraps inside the balloon. This is called a "raisin".

Tie the apple twisted balloon onto the raisin.

Tie a loop of balloon around it to form the rim of the hat.

Inflate a second 5" round balloon keeping it soft, but tie the knot as close to the lip as you can. Push the air up to the nozzle and hold the lip of the head against it.

Push the lip knot of the head into the second balloon as you release the pressure and catch hold of it through the balloon to form an apple twist.

[See below for further explanation](#)

Tie the twist in place with a scrap. Tie a knot at the end of the scrap because you will need to make an apple twist in the next balloon and you will need some slack between them.

Inflate the 10" round balloon keeping it soft.
Tie the knot as close to the lip as you
can get it.

Apply pressure to the 10" round balloon to push
the air up to the lip end and hold the
knotted end of the scrap to it.

Release the pressure from the 10" round balloon
and push the knotted scrap into
it to form another apple twist.
This will be the bottom body bubble.
Tie a scrap in to secure the apple twist.

Catch hold of the second scrap of
balloon in the head bubble and
make a raisin twist.

Make the carrot nose. Inflate the orange scrap to the desired size and attach it to the raisin twist.

Inflate the 160 balloon to about 16" and wrap it around the base of the head to form the scarf. Make a loop and add a pinch twist to finish the scarf.

Draw the eyes, mouth and buttons on to finish the snowman.

Explanation: If you push the air up to the lip end of the round balloon before you push an apple twist into it, you will find less resistance as you release the pressure. The hand pushing the knot inside the balloon will be drawn in. If you don't push the air up first you will find a lot more resistance and it will be much harder to twist the knot to hold the apple twist. Also there is a greater risk of the round balloon bursting.
