

Spider

You will need:

- 1 x 260
- 2 x 160
- 1 x 360 scrap
or
1 x 5" round

Inflate the 260 balloon leaving a 4" tip. Make four 4" bubbles and wrap the lip knot into the last bubble to form part of the body.

Make another two 4" bubbles followed by a 1" pinch twist.

Make another two 4" bubbles.
Twist the 4" bubbles into the starting point as shown. The bubble marked with the number 10 will be used later to make the rear end.

Fully inflate two 160 balloons.
Release a little air from the balloons and tie them off. Split each balloon in half to make four equal lengths of balloon. These will be the legs.

Hold the 160 leg balloons across one set of four bubbles and fold the other set of four bubbles over them.

Use the pinch twist to hold the two sets of bubbles together by bringing it over the opposite set of bubbles and back up again.

Make a 3" bubble in the remaining 260 bubble (bubble 10). Then squeeze the balloon just past the 3" bubble and twist the balloon into the start point as you would with a loop. This will make the 3" bubble bow down to form the spider's rear end.

Extend the remaining bubble across the bottom of the body and wrap it into the pinch twist. Remove any remaining length of balloon.

This is how the spider should look from the top view.

Inflate the 5" round balloon. Keep it very soft. Squeeze the air up to the lip and make a 1½" bubble at the lip end.

Wrap the red 1½” bubble into the black pinch twist.

Make a small bubble at the other end of the 5” round balloon and wrap it into the black rear end bubble.

If you don't have a 5” round this model looks fine using a 360 scrap instead.

Divide the red bubble at the front of the spider into three bubbles to form the eyes. If it is too tight just have two eyes instead.

Bend the legs.

These spiders are made using a 360 scrap in the middle instead of a 5" round.
