

Shoes

By Thelma Levett

To make this shoe I used a 5" Sempertex heart. This heart has a long neck.

Insert a knotted scrap of balloon into the heart.

Inflate the heart keeping part of the neck un-inflated.

Inflate a 260 (leg). Tie a big bulky knot at the lip. Hold the knot against one of the heart lobes. Push it down into the heart balloon towards the opposite lobe.

Catch hold of the knot through the skin of the balloon as you would with a tulip twist. So you should have the leg going into one of the heart lobes and you should have hold of it through the opposite lobe.

Tie the knot into place with a scrap of balloon.

At the point shown here catch hold of the knotted scrap you earlier inserted into the heart balloon.

Tie a scrap of balloon around the knotted scrap to form a raisin. Pull the lip of the heart balloon up and tie it to the scrap holding the raisin.

Tidy the shoe up removing any excess scraps of balloon if you are making the pixy shoe. You could add a little bubble to the toe of the shoe to hide the knot. I have done this shoe with a 2" yellow bubble and it looks nice.

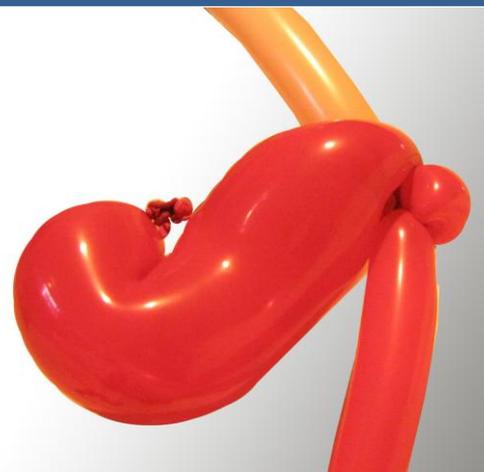

High Heel Shoes

To make this into a high heel shoe simply inflate a 160 balloon and tie it into knot at the base of the shoe.

Make a 1½" pinch twist and position it at the back of the shoe to push the heel into the right direction.

Make a 4" or 5" bubble and remove the remaining balloon. Tie the end. Inflate a piece of black 160 balloon. Push the heel knot into the black balloon and catch hold of the knot through the skin of the balloon. Twist the bubble to catch the knot. Remove the excess.

Add some decoration to the front.
